Course Overview

This course provides an in-depth, Medical Claims & Coding Specialization: Value-Based Payment Strategies. The practice-oriented understanding of how artificial intelligence and data analytics are reshaping the entire medical claims ecosystem—from adjudication and coding to DRG classification and value-based reimbursement. Participants explore how automation, predictive modeling, and healthcare data analysis improve claim accuracy, streamline coding compliance, reduce fraud and denials, and support fair, value-driven payment models.

The course integrates modern techniques to detect anomalies, validate coding integrity, optimize DRG assignments, and enhance adjudication processes using AI-powered healthcare fraud analytics. Through Gulf region and international case studies, learners gain hands-on insights into the relationship between coding accuracy, DRG integrity, and efficient value-based payments.

By the end of the program, participants will be able to design analytical frameworks, apply automation tools, and implement data-driven reimbursement strategies that strengthen transparency, compliance, and operational performance across the claims lifecycle—supporting a sustainable, efficient, and accountable healthcare delivery system.
